

## Philips Automotive

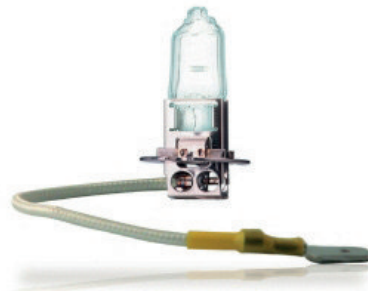

Philips Automotive Halogen Lamps ensure an optimal level of lighting. The key to this is the precise filament positioning, guaranteeing a well distributed light beam. The outstanding quality of the filament quality ensures a longer lifetime without a blackened bulb – essential in rail applications.

Philips Longerlife lamps have been designed for professionals seeking lamps that last longer in intensive use. The innovative use of Krypton gas limits tungsten evaporation from the filament. This is the key to the lamps longer lifetime.

Philips Automotive Lighting is dedicated to quality and has decided that Zero Default is the No1 business driver for the coming years, guaranteeing customers optimal performance and quality.
