

New Infrastructure Products Catalogue Launched

The new Unipart Rail Infrastructure catalogue is was launched at Railtex in February.

The new catalogue, which incorporates Train-Borne AWS and TPWS equipment, is the first to be published since NRS and Railpart combined as Unipart Rail in 2006.

The catalogue is viewed as an industry standard document, providing support to estimators, engineers and buyers across the industry. Used in combination with the Unipart Rail Infrastructure Portal where registered users can also view prices on-line, the catalogue is an invaluable tool for the industry.

To receive you personal copy of the catalogue, please e-mail your name, company, full address and telephone number to enquiries@unipartrail.com and we will ensure that one is mailed to you.
