

Manufacturing, Service, Repair & Refurbishment

You don't want your business being wasteful - not only does it lead to materials being scrapped and cost more to replace, but it is also worse for the environment if you replace rather than repair. We can help you maintain the equipment you have as our product expertise extends into manufacture, service, repair and calibration of materials.

Our Remanufacture and Service Centres return thousands of products to as-new condition. Covering the wide range of railway materials from both infrastructure and rolling stock, the services reduce costs to you through eliminating the need to procure new material.

The service covers both modern electrical and electronic equipment as well as older mechanical equipment such as relays & Token Block equipment.

Service and Repair products include:

- Point Machines
- Radios
- Relays
- Electronic & Electrical
- Automatic Warning Systems (AWS) & Train Protection & Warning System (TPWS) equipment
- Hydraulics
- Track Circuit Assistors

We ensure all our work is undertaken to both the original manufacturer specifications and the relevant Network Rail, ATOC & ROSCO and other industry standards to ensure that product performance is as good as new.

Our manufacturing skills cover:

- Location Cases & Relocatable Equipment Buildings (REBs)
- LED Signalling Equipment
- Customer Information Systems
- Traffic Control Equipment
- Reed & Electronic Items
- Self-testing Current Rail Indicator Device (CRID)
- AWS & TPWS
- Barrier Booms and Level Crossing Equipment
- Track Circuit Aids
- Telecode Time Division
- Multiplexing (TDM) systems.
