

Blockshelf Standard Luminous Indicator

Brand new units now available from Unipart Rail

For many years only reconditioned units have been available, and these have become increasingly difficult to source.

Blockshelf Standard Luminous Indicators are commonly used in a Mechanical Signal Box environment. Mounted on the blockshelf providing the Signaller with a visual luminous indicator of the associated remote signal.

The Unipart Rail Blockshelf Standard Luminous Indicator has been developed as a newly manufactured unit - a direct replacement for the now obsolete original moulded units, allowing the continued use of the SBC (B15) style lamps.

This is manufactured from modern robust materials to permit continued use and availability and has a direct 'retro fit' compatibility with existing Blockshelf Standard Luminous Indicators.

Network Rail Ref No: PA05/02952
