

Lean Thinking

At the heart of Unipart's own transformation was the acquisition of deep knowledge and practical experience of implementing Continuous Improvement and engaging employees in sustainable change.

As a result, the Unipart Expert Practices business provides a proven and more sustainable approach to introducing Lean thinking into organisations.

This service includes:

- Deep analysis of your business and identification of the core 'blockers' to improvement.
- Engagement of your own staff in analysing the way your business works.
- Teaching of the skills needed to redesign your business into a sustainable Lean enterprise.
- Facilitation of the journey to Lean.

Last year our clients sent over two thousand of their own staff, drawn from all levels, to visit and learn from our Teaching Factory, Teaching Distribution Centre and Teaching Office.

Only Unipart is able to first design the solution that is most appropriate for your needs and then provide you with guides from our ranks of Expert Practitioners who will work alongside your staff in a practical way that brings rapidly to life all the benefits of going Lean.

The key to introducing Lean thinking is in the engagement of your employees. At Unipart we understand that this is a fundamental principle and ensure all improvements are fully adopted by your people to sustain and develop the process we help to implement.

Controlling Materials Using lean and effective processes

Materials stockholding and management can use a great deal of your resources - both financial and people - and it is important to make the best and most economic use of them.

Unipart has many years of experience in this area and through our Supply Chain Management service we can help you improve your materials operations through:

- Stock condition assessment
- Recommending action plans for improving your operations
- Implementing recommendations and training employees
- Managing material supply and consignment stocking
- Setting-up new stocking points and warehouses
- One-off mobilisations
- Temporary storage solutions
- Materials cataloging
- Stock counts and product identification.
