

Reed Equipment

Unipart Rail manufactures and services a wide range of Reed Equipment

Reed Manufacture

To support the industry in ensuring the continued availability of Reed equipment, Unipart Rail took over Reed manufacture from Alstom. This equipment is used in the transmission of signals via tuned frequencies between signalling sites and interlocking.

Since acquiring the IPR and manufacturing rights, and achieving Network Rail approval, Unipart Rail manufactures the full range of equipment including transmitter and receiver filters, amplifiers, track filters and associated power supply units at its Service Centre.

Service & Reconditioning

Unipart Rail also services and reconditions existing units, implementing all recommendations of technical assessment, and returning the units to full conformity of existing specification. All units returned to Unipart Rail are checked and upgraded to the correct specification.
