

The Environment Protecting Oil Absorbent Drip Mat

Protects any surface from penetration and contamination.

Designed for use at the depot or trackside, the Environment Protecting Oil Absorbent Drip Mat is designed to replace existing forms of drip trays with a new light, user friendly method of containing oil and contaminant spills. The mat is rugged enough to stand leaking components on it in all weather.

The mat is constructed from layers of materials which absorb oil-based contaminants whilst allowing passage of water, such as rainfall, thus making the tray easy to handle after use and eliminating costly and complex emptying of contaminated trays after use. The mat can be stood on uneven ground or slight inclines with no loss of performance ensuring all surfaces are protected at all times.

How it Works

The design allows oil, fuel, hydraulic fluid, brake fluid and other non-emulsion based contaminants to be caught in the base and rainfall/water to escape through the side walls. The base of the mat is non-permeable fabric laminated with an oil soak filter to absorb the oil, and protected by a permeable top fabric to allow free passage of contaminants. The side wall is permeable with a filter fabric that allows free passage of water but not oil. This will protect depots and trackside operators from inadvertent spills of contaminant.

The drip mat is cleaned simply by wringing it out into a suitable container.

Trackside use

Depot use

Specifications

Top cover

- Vinyl coated polyester mesh
- Abrasion resistant
- Oil & chemical resistant
- UV resistant
- High tensile strength
- Temperature resistance -20°C to 107°C
- Melt point, 157°C

Base material

- Woven Olefin fabric coated with Olefin resin
- Stain, chemical, and mildew resistant
- Abrasion resistant
- UV resistant
- High tensile strength
- Temperature resistance -20°C to 107°C
- Melt point, 157°C

Fill material

- Polypropylene fibre & polyester yarn
- High ratio of oil to fabric weight absorption
- Non toxic & non hazardous
- UV resistant
- Melt point, 135°C

Sizes and Catalogue Numbers

- 1m x 68.5cm Cat No: 0039/500017
- Liner Cat No: 0039/500018

Absorbent Liner

The absorbent liner is a useful addition to complement and extend life. The liner sits snugly into the base but is easily removed for cleaning or replacement. Just as the drip mat has a non-permeable base and a tough top cover so has the liner to give prolonged efficient service. Cleaning of the liner is simple - remove the liner and squeeze out the oil into a suitable receptacle, and then replace for reuse. The capacity of a standard liner is approximately 4.5 lts and may become quite heavy, in which case it is recommended to clean at 50% capacity.

User Feedback

"What a fantastic product, gone are the days of needing a machine to position the drip trays or the desperate search for a waste oil tanker to come and empty the drip trays following a not uncommon downpour .It's a refreshing change to find something that satisfies the client without creating more work for our site teams."

Chris Marley, Chris Marley Civil

"The feedback from our site teams have been fantastic with the majority saying "how easy they are to use, no more fussing about trying to get a metal drip tray sited under our plant". We only had the small Plant Nappy available at first, but now we have them in all different sizes and use them for all manner of plant."

Kevin Coldwell, Barhale construction
