

Fuel pick-up system

from Unipart Rail

Technology to save fuel and the planet

- Deliver 92% cleaner fuel to engines
- Reduces fuel consumption by up to 5%
- Reduces CO₂ emissions by up to 5%
- Quick installation & zero maintenance

FUEL ACTIVE

PERFORMANCE IMPROVEMENT PARTNER

Making a world of difference. Today.

The FuelActive pick-up system is a unique and proven technology that delivers 92% cleaner fuel to the engine, reducing contamination and increasing fuel efficiency.

Standard diesel engines and storage units draw fuel from the bottom of the fuel tank where water, sediment, diesel bug and other contaminants settle.

The FuelActive revolutionary pick-up system draws fuel from just below the surface of the tank, ensuring that only clean fuel enters the lines, eliminating the costly effects of fuel contamination.

As a result of only burning clean fuel, the thermal efficiency of the engine reduces fuel consumption, whilst maintaining factory-level emissions standards through its life cycle.

Reduce Fuel Consumption

Reduce harmful Emissions

Reduce unplanned maintenance

Reduce component replacements

Increase machine uptime

Reduce total cost of ownership

Benefits of the FuelActive solution

- Cleaner fuel improves fuel efficiency, resulting in better performance
- Harmful emissions are reduced as engines emit lower levels of CO₂
- Engine performance is improved, reducing the total cost of ownership
- Fuel injectors are preserved, extending the life expectancy of diesel engines
- Blocked fuel filters and damaged fuel pumps are avoided, reducing engine downtime and maintenance costs
- Component replacement is reduced
